Summary Statistics
Vol. I Water, Land, and Related Data

United States Department of the Interior
Bureau of Reclamation

I 27.1/4:

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. Administration.

The Bureau of Reclamation of the U.S. Department of the Interior is responsible for the development and conservation of the Nation's water resources in the Western United States.

The Bureau's original purpose "to provide for the reclamation of arid and semiarid lands in the West" today covers a wide range of interrelated functions. These include providing municipal and industrial water supplies; hydroelectric power generation; irrigation water for agriculture; water quatlity improvement; flood control; river navigation; river regulation and control; fish and wildlife enhancement; outdoor recreation; and research on water-related design, construction, materials, atmospheric management, and wind and solar power.

Bureau programs most frequently are the result of close cooperation with the U.S. Congress, other Federal agencies, States, local governments, academic institutions, water user organizations, and other concerned groups.

Summary Statistics, Vol. I, is compiled and published annually by the Division of Water and Land Technical Services, Code D-405, Bureau of Reclamation, PO Box 25007, Denver CO 80225.

Foreword

Summary Statistics, Vol. I, *Water, Land, and Related Data*, is one of three volumes containing data on Bureau of Reclamation water and land resource accomplishments. This volume contains information primarily for use by those who desire detailed information on specific Reclamation projects. Included are historical and 1984 data on acreage, yield, production, gross crop value, and multiple-purpose functions such as municipal and industrial water service, power, recreation, and flood control.

Summary Statistics Vol. II and III are published separately on a fiscal year basis. Vol. II, *Finances and Physical Features*, contains cost and repayment data, the Bureau's "Consolidated Financial Statement," and related historical data. It also contains physical statistics on the various types of dams, canals, powerplants, and related features constructed or operated under Reclamation's program. Vol. III, *Project Data*, presents — on an individual basis — much of the data summarized in the other volumes.

An annual crop census and reports on other project functions are prepared on each operating project served by facilities constructed or rehabilitated by the Bureau of Reclamation. Legislative acts of 1924 and 1939 made the annual crop census the basis for determining equitable amounts due the United States as annual installments on certain types of construction repayment contracts.

This continuing statistical series has proven valuable to analysts preparing economic and financial studies of Reclamation projects. The history of irrigation development, crop production, and other project functions provides basic data for investigations of proposed new projects and the extension of existing ones. This record has been used in the settlement of disputes arising from controversies over water charges and allowances, crop damage claims, operation and maintenance charges, and adjustments to repayment contracts. Although the report format has been revised from time to time, care has been taken to preserve continuity in important statistical series.

Glossary

Irrigable Area for Service
The acreage classified as irrigable for which project works have been constructed and project water is available. This acreage may change from year to year — generally upward — as project works are completed and service is made available to additional acreage. Lands that have not been classified but which are furnished water under Special or Warren Act contracts and lease or water rental agreements are shown as a part of the irrigable area for service.

Irrigable Area Not for Service
The part of the total irrigable area for which service eventually will be available but for which project facilities have not yet been constructed.

Irrigated Acreage
The irrigable acreage actually irrigated in any one year. It includes irrigated cropland harvested, irrigated pasture, cropland planted but not harvested, and the acreage in irrigation rotation used for soilbuilding crops.

Full Irrigation Service Land
Irrigable land now receiving, or to receive, its sole and generally adequate water supply through facilities which have been or are to be, constructed, rehabilitated, or replaced by the Bureau of Reclamation.

Supplemental Irrigation Service Land
Irrigable land now receiving, or to receive, an additional or reregulated supply of water through facilities constructed by, or to be constructed by, the Bureau of Reclamation. This water, together with that obtained from nonproject sources, generally will constitute an adequate supply.

Temporary Irrigation Service Land
Irrigable land for which a water supply is delivered under temporary arrangements. The acreage may vary from year to year. When repayment and water service contracts are finalized upon such lands, they will be placed in either the Full or Supplemental Service category.

Gross Crop Value
The total market value of all crop production from irrigated lands before deducting costs of production. Unit prices represent the weighted average prices received by farmers for the part of the crop that is sold. Production and price information are obtained from reports of farmers, project-operating personnel, local agricultural specialists, and State-Federal agricultural statisticians.

Administrative Regions of the Bureau of Reclamation
Seven regions located in the 17 Western States and Hawaii, principally established on the basis of watershed or river basin boundaries. (See Bureau of Reclamation Projects map that follows.)

Spotlight on 1984 Accomplishments

After 82 years of Bureau of Reclamation activities, the Federal investment in completed Reclamation project facilities totaled $7.8 billion as of September 30, 1984. This investment includes $1.6 billion in specific irrigation facilities, $1.4 billion in electric power facilities, $0.2 billion in municipal and industrial facilities, and $4.6 billion in multipurpose and other facilities. About 81 percent of this total investment is reimbursable to the Federal Treasury.

Project facilities in operation during 1984 included:

- 355 storage reservoirs
- 360 diversion dams
- 15,843 miles of canals
- 1,333 miles of pipelines
- 275 miles of tunnels
- 36,179 miles of laterals
- 16,569 miles of project drains
- 243 pumping plants over 1,000 horsepower
- 52 hydroelectric powerplants

These features include those constructed by others and in operation on Reclamation projects.

Completed water service facilities are transferred to local water user organizations for operation and maintenance as soon as the organizations become capable of assuming these functions. Reclamation operates and maintains on a permanent basis only power features and reserve water storage and supply works on multipurpose projects.

Of the 225 operating projects or units providing service in 1984, 163 were operated entirely by water user organizations, 38 were operated jointly by water user organizations and Reclamation, and 24 were operated entirely by Reclamation. Of these 225 operating projects, 69 are loan projects constructed under the Small Reclamation Projects Act (Public Law 84-984) or the Distribution Systems Loan Act (Public Law 84-130).

Highlights of Calendar Year 1984 Operations:

Water Deliveries totaled 29.6 million acre-feet (9,632 billion gallons). This includes 25.7 million acre-feet (8,374 billion gallons) for irrigation, 2.7 million acre-feet (877 billion gallons) for municipal and industrial use, and 1.2 million acre-feet (381 billion gallons) for other nonagricultural uses.

Population Served was 23.3 million people — an increase of 0.8 million persons over 1983. Of this total, 20.6 million people received municipal and industrial water. The

Sunset at Bridge Bay on Shasta Lake, California (Central Valley Project).

remaining 2.7 million people received irrigation service on urban and suburban residential, commercial, and industrial lands and on full- or part-time irrigated farms.

Gross Value of All Crops produced totaled $7.3 billion — a $0.3 billion increase over the $7.0 billion in 1983. The value per irrigated acre was $749, a $9 per acre decrease from last year.

Acreage Irrigated was 9,805,000 acres — an increase of 569,000 acres over 1983. Irrigation service was available to 12,041,000 acres compared to 11,901,000 acres in 1983.

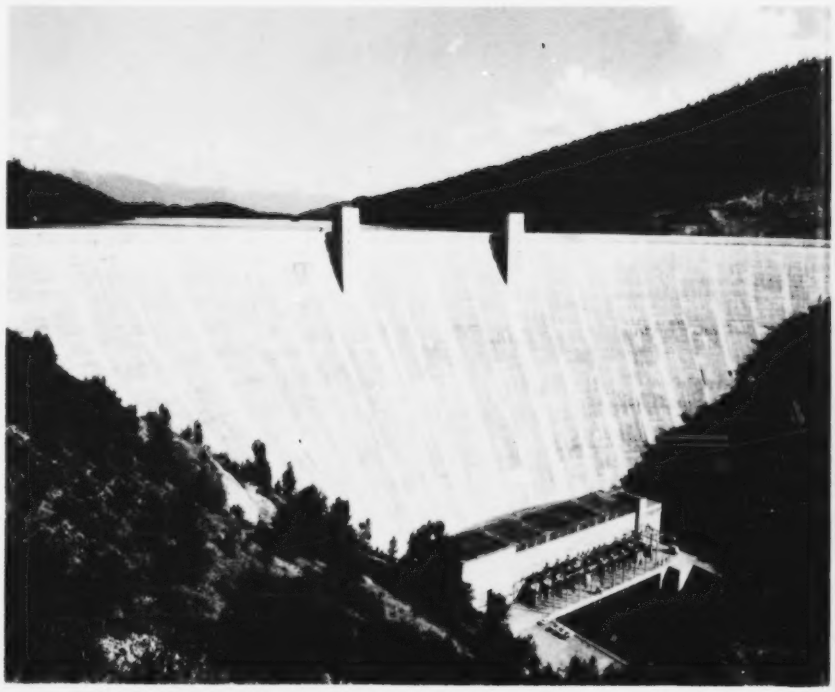
Food, Fiber, and Forage Production totaled 58.9 million tons. This production would meet the annual food requirements for 42 million people with a per capita consumption of 2,500 calories per day.

Irrigated Farms totaled 144,000, of which full-time farms represented 62 percent of the total number of farms and 83 percent of the irrigable land in farms.

Municipal and Industrial Water Deliveries totaled 877 billion gallons. This was an average of 116 gallons per capita per day for the more than 20.6 million people served and represented 60 percent of their average daily requirements.

Recreation Use at 291 recreation areas totaled a record 50.4 million 12-hour visitor days — 6 million more than in 1983.

Electricity Generated by Reclamation's 52 hydroelectric powerplants and 1 wind farm amounted to 62.7 billion kilowatt hours in FY 1984. These powerplants have a total installed capacity of 13.6 million kilowatts. These figures include Reclamation's share of the Navajo Generating Station steamplant.



Hungry Horse Dam, Montana, is used primarily for flood control and power generation.

Electrical Energy Revenues totaled $607 million in FY 1984 from energy generated by Reclamation powerplants and marketed by the Department of Energy. This was a 40 percent increase over FY 1983.

Flood Control Benefits amounted to $242 million — over three times the 35-year average annual benefit of $78.5 million for the period 1950-84.

Child uses drinking fountain in campground at Cascade Reservoir, Idaho (Boise Project).

rrigation

"Big gun" sprinkler irrigates watermelon field near St. Paul, Nebraska (Pick-Sloan Missouri Basin Program).

The general agricultural economy the United States continued to be the downside in 1984, due pri-arily to the high cost of doing busi-ess, high interest rates, relatively w prices for agricultural products, nd decreasing values of farmland. ome farmers were forced to sell it in 1984 because of these fac-rs. Other factors affecting the agri-ltural economy were weather onditions, crop surplus programs, nd U.S. and foreign currency ex-hange rates. The demand for food oducts was relatively high, which ontributed to a slight increase in ices.

In general, 1984 was characterized by wet and cool spring weather followed by a hot and dry growing season. The wet, cool spring forced replanting in some areas and resulted in decreased production.

A contrast to the generally wet spring was evident in Northern Montana where drought conditions have persisted for the fourth straight year. Inflow to reservoirs in this area averaged 37 percent of normal in 1984, and most irrigation deliveries were stopped in July. Conversely, headwater runoff in the Missouri River Basin was 284 percent of normal. Most other areas in the Western United States experienced average weather conditions with local variations affecting the agricultural economy in those areas.

Prices for farm products were about 5 percent higher overall than in 1983. These prices were influenced by an increase in agricultural exports in 1984. Agricultural exports in 1984 were valued at $38 billion compared to about $35 billion in 1983. A relatively strong export market in wheat and corn contributed to this increase.

The 1984 Reclamation Crop

Reclamation projects perform a significant role in agricultural production and provide major sources of income and employment throughout the Western United States and nationally. Many of the areas serviced by Reclamation projects are major producers of food and fiber crops not grown extensively elsewhere in the United States. Some of these areas — such as parts of California, Arizona, Texas, Washington, and Oregon — are especially important for the production of vegetables, citrus and noncitrus fruits, nuts, and cotton.

Crops produced on lands which receive irrigation water from Reclamation projects are an important source of food and fiber for foreign trade. Many crops are exported to other countries, providing foreign revenue to reduce the U.S. balance of payments and also the national deficit. Many of these commodities are used in various domestic welfare and foreign aid programs to help feed improverished people throughout the world.

Agricultural production on Reclamation project lands played a major role in U.S. agriculture in 1984. Almost 10 million acres of Reclamation land were irrigated in 1984 which produced a gross crop value of $7.3 billion. Table 1 illustrates the indexed values (based on 1977) for gross crop value, acreage irrigated, crop yields per acre, tonnage produced, and crop prices on Reclamation lands from 1961-84. These data show an increase in all categories except yields, which remained the same in 1983 and 1984.

The cumulative value of crops produced on Reclamation projects through 1984 totaled $106.4 billion — far exceeding the Bureau's cumulative costs for constructing irrigation facilities, which reached $5.1 billion in 1983. In fact, the gross crop value for 1984 alone ($7.3 billion) exceeds these construction costs.

Table 2 lists the Reclamation projects having cumulative gross crop values in excess of $1 billion. These 15 projects accounted for almost $87 billion, or 81 percent of the total 1984 cumulative crop value. The Central Valley Project in California continues to rank first with a cumulative gross crop value of $32 billion.

Types of Service. — Reclamation projects provide three types of irrigation service: full, supplemental, and temporary. Lands receiving full service generally obtain all their irrigation water from facilities constructed by Reclamation. Farms receiving supplemental service obtain a portion of their water supply from non-Reclamation sources. Temporary service is supplied on a year-to-year basis, depending on the existing water supplies and the amount of increased acreage under permanent contracts.

Table 1. – Indexes of Gross Crop Value, Irrigated Acreage, Crop Yields Per Acre, Tonnage Produced, and Crop Prices, 1961-84

Year	Gross Crop Value	Acreage Irrigated	Crop Yields Per Acre	Tonnage Produced	Crop Prices

Total	11,901,335	12,040,688	+ 139,353	9,235,955	9,805,023	+ 569,068

Table 4. – Land Use on Reclamation Projects, 1983 and 1984

Description	Acres	
	1983	1984
Land in irrigation rotation:		
Harvested cropland and pasture	9,038,135	9,605,852
Cropland not harvested and soil building	197,820	199,171
Acres irrigated	9,235,955	9,805,023
Fallow or idle	1,203,368	547,533
Total acres in irrigation rotation	10,439,323	10,352,556
Land not in irrigation rotation:		
Dry cropped, idle, fallow, or grazed	367,079	563,013
Farmsteads, roads, ditches, and drains	364,313	377,876
Total acres not in irrigation rotation	731,392	940,889
Urban and suburban, residential, commercial, and industrial lands	730,620	747,243
Total irrigable area for service	11,901,335	12,040,688

Valley Center Municipal Water District, California, a loan project constructed under the Small Reclamation Projects Act.

As shown in table 3, both the irrigable and irrigated acres for all types of service increased between 1983 and 1984. Irrigated acres increased by 6 percent, with temporary service showing the largest gain — 31 percent. About 81 percent of the total irrigable acreage for service was actually irrigated in 1984.

Extension of Irrigation in 1984. — One project came into service and reported crop production for the first time in 1984.

Hidalgo County Water Improvement District No. 5 is located in the Lower Rio Grande Valley near Weslaco, Texas. The loan for this Small Reclamation Project provided for the replacement of the District's distribution system and pumping plant. The project includes 5,763 irrigated acres, of which 5,563 acres were irrigated and produced a gross crop value of $4.9 million.

Land Use. — Table 4 shows the various land uses on Reclamation projects in 1984. The total irrigable acres for service increased slightly over 1 percent from 1983. Lands used for residential, commercial, and industrial uses increased about 2 percent to 747,243 acres, which represents about 6 percent of the total service area.

Table 5 compares the development of irrigable acres for service with the acreage used for urban and suburban residential, commercial, and industrial uses since 1966. These trends illustrate the continuing increase in land used for purposes other than crop production.

Farms and Farm Population. — Nearly 144,000 full- and part-time farms with a population of 622,600 received irrigation service from Reclamation projects in 1984. The number of farms was down 1 percent, and the farm population decreased nearly 5 percent from 1983. Table 6 lists the number of farms, farm population, and irrigable acres served in 1984.

Maturing barley.

Table 5. – Irrigable Area for Service and Land Used for Residential, Commercial, and Industrial Purposes, 1966-84

Year	Irrigable Area for Service		Residential, Commercial, and Industrial Use

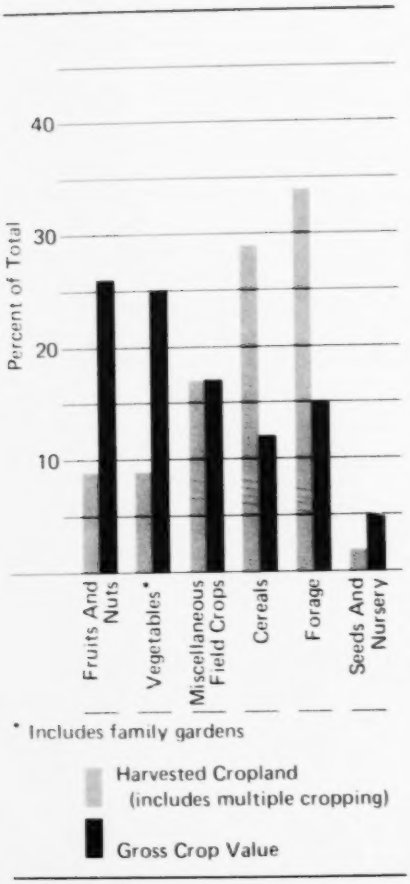

Figure 1. – Harvested Cropland and Gross Crop Values by Major Crop Categories, 1984

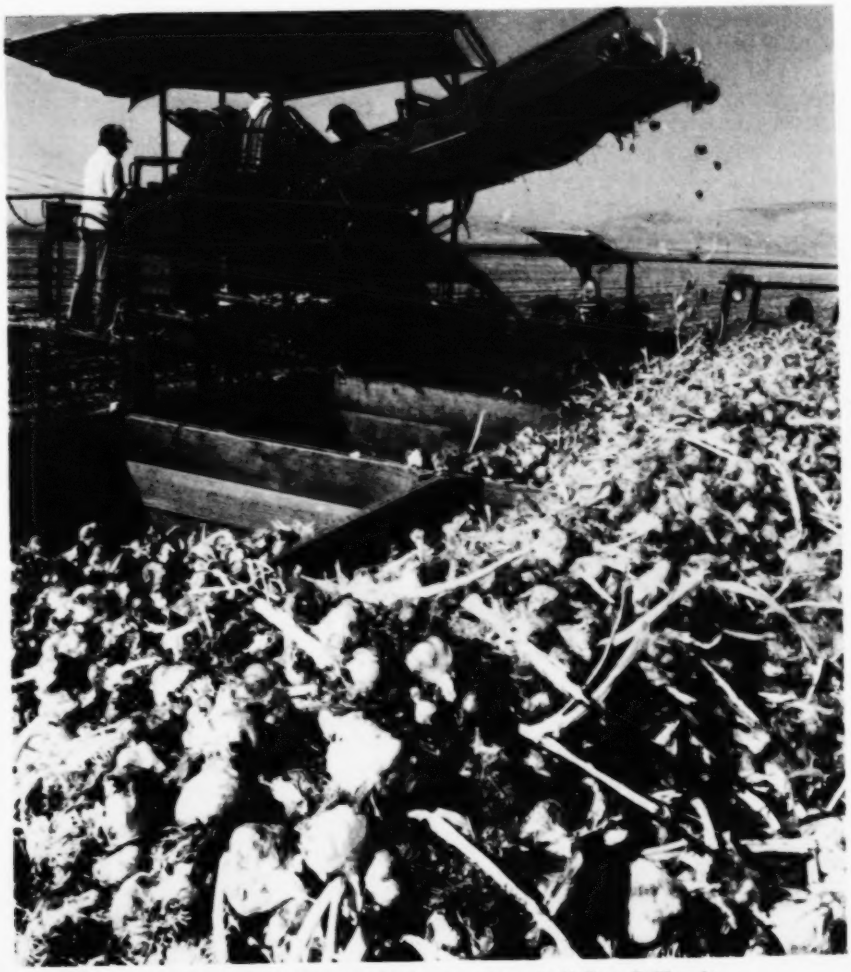
Crop Production and Crop Value. — Irrigation water provided by Reclamation projects permits farmers in the West to improve the quality of crops produced, to increase yields, to diversify and broaden their farm enterprises, and to reduce the risks associated with variability in weather conditions, including droughts and floods. A stable irrigation supply is particularly important in areas that are subject to wide variations in precipitation during the crop growing season. Water from Reclamation projects is stored, conveyed, and distributed as needed to increase overall sustained crop production.

Figure 1 illustrates the relationship between land use and gross crop value for the major crops grown on Reclamation project lands in 1984. Fruits and nuts was the leading crop category, accounting for 26 percent of the total gross crop value grown on only 9 percent



Garlic being harvested in the San Joaquin Valley, California.

of the total harvested acreage. Cereals followed closely with 25 percent of the gross crop value harvested from 9 percent of the total acreage.

Gross crop values generally were higher than in 1983. Fruits and nuts (+5%), miscellaneous field crops (+20%), forage (+9%), cereals (+7%), and seeds and nursery (+30%), all showed increases. Vegetables (-3%) was the only crop category showing a decrease in gross crop value.

Crops grown on Reclamation project lands serve the needs of a significant population. Table 7 shows the 1984 food production in both tons and calories. Converting tons to calories equivalents and assuming an average daily per capita requirement of 2,500 calories, this food production would supply the annual food requirements for 42 million people.

Land Use and Crop Value by State. — Irrigable acreage for service increased slightly in 1984, as shown in table 8. Minor decreases in Idaho, Oklahoma, and South Dakota were offset by increases in nine

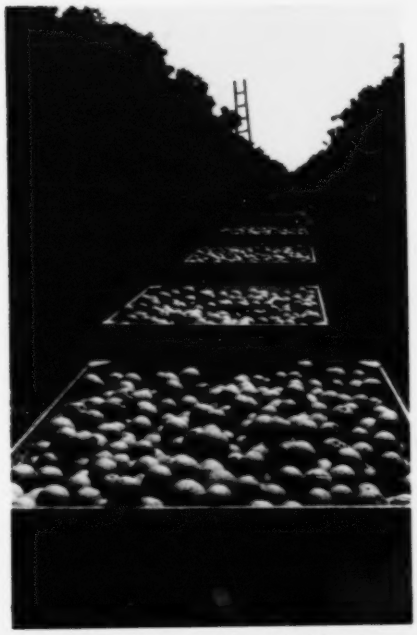
states. California showed the largest gain with an increase of 114,000 irrigable acres for service.

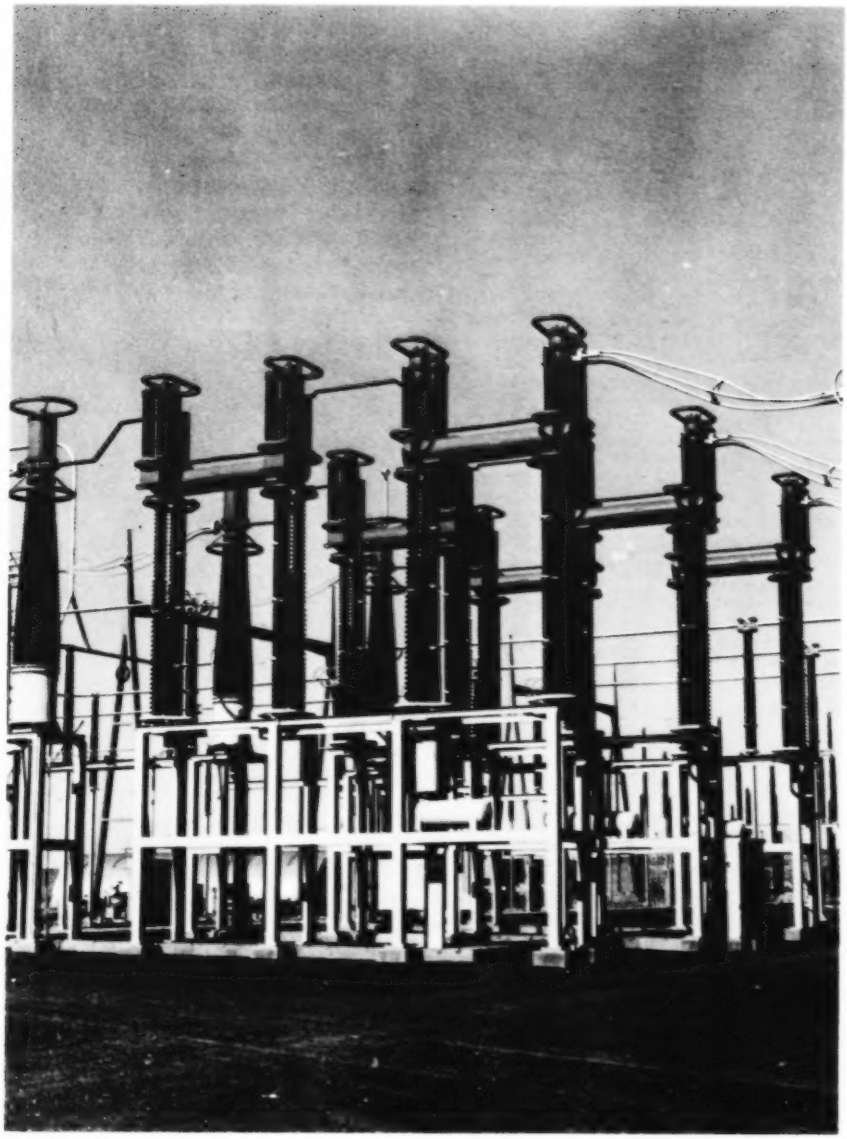
Irrigated acres also increased overall. Minor decreases occurred in four states. Again, California showed the largest gain with an increase of 372,500 irrigated acres.

As shown in table 9 and on figure 2, the gross crop value for the 17 Western States and Hawaii totaled $7.3 billion with an average value of $749 per irrigated acre. The gross crop value increased almost 5 percent over 1983, while the average crop value per irrigated acre decreased about 1 percent.



Navel oranges are harvested from a grove which receives water from Friant Dam (Central Valley Project).

Power



Breakers in the 500-kilovolt switchyard at Grand Coulee Powerplant, Washington (Columbia Basin Project).

The Bureau of Reclamation continued to make a significant contribution to the Nation's energy supply in FY 1984. Reclamation powerplants generated a record 59.1 billion kWh (kilowatt hours) of electrical energy which, along with a capacity of 13.1 GW (gigawatts), is vitally important to those areas of the country dependent on these sources. The energy generated in 1984 was sufficient to supply the residential needs of 20.5 million people. Reclamation also has an entitlement to 547 MW (megawatts) of capacity from the Navajo Generating Station steamplant near Page, Arizona, which produced an additional 3.6 billion kWh of electricity.

Hydroelectricity, a renewable form of solar energy, provides nonpolluting power and helps to reduce U.S. dependence on foreign energy sources. Production of this energy from thermal plants would have required the equivalent of either 28.8 million tons of coal, 106.4 million barrels of oil, or 637.2 billion cubic feet of natural gas.

The energy generated by Reclamation powerplants is transmitted and marketed by the Bonneville Power Administration and the Western Area Power Administration, both agencies of the Department of Energy. Revenues from the sale of this energy amounted to $607 million in FY 1984.

At the end of FY 1984, Reclamation operated 53 powerplants (52 hydroelectric and 1 wind farm) having a total rated capacity of 13.1 — up from 12.7 GW in FY 1983. This increase resulted from the addition of a unit at Grand Coulee Pumping-Generating Plant and a unit at Mt. Elbert Pumped-Storage Powerplant plus the uprating of individual units at six powerplants.

Total		13,093	59,098

* Bureau of Reclamation's share of 424,000-kW pumping-generating plant jointly owned with the State of California.

The powerplants uprated were Glendo (Wyoming), Shasta (California), Hoover (Arizona), Glen Canyon (Arizona), Blue Mesa (Colorado), and Flaming Gorge (Utah). Although generally not increasing energy, these uprates allow utilities to rely upon Reclamation's greater peaking capacity and thus to make best use of their baseload coal-fired powerplants. This reduces the use of more costly gas and oil turbines to meet peak demands — again further reducing U.S. dependence on foreign oil.

In addition to the 53 powerplants, Reclamation operated and maintained 299 circuit miles of transmission lines, 39.6 circuit miles of transmission cables, and 100 substations and switchyards having a capacity of 17.7 gigavolt amperes.

Table 10 lists the major hydroelectric plants operated by Reclamation during FY 1984, with the installed capacity of each. Figure 3 illustrates the relationship between installed capacity and energy generation since 1974. Due to the unusually high snowpack and related runoff, FY 1984 hydroelectric generation far exceeded average yearly generation figures.

pages tightly bound

Municipal, Industrial, and Other Nonagricultural Water

Sacramento, California, receives municipal and industrial water from Reclamation's Central Valley Project.

As populations, businesses, and industries expand across the West, the Bureau of Reclamation continues to place increasing emphasis on multipurpose water resource development to ensure that ample water will be readily available when and where it is needed. In 1984, Reclamation projects provided record amounts of domestic and industrial water to meet the needs of a growing and diversified population.

Alltime highs were set in 1984 for the amount of M&I (municipal and industrial) and other nonagricultural water delivered and for the population served by Reclamation projects. A record 1,258.3 billion gallons of water were delivered to help meet the needs of a record 22.7 million people. These water deliveries were 26 percent more than in 1983, and the population served was up almost 4 percent over last year.

As figure 4 illustrates, both the population served and water delivered have been increasing steadily since 1965. During the period 1965-84, the number of M&I and other nonagricultural users has increased nearly 71 percent; water deliveries have more than doubled. These figures indicate the rapidly growing need for continued multipurpose water resource development to serve future generations.

The M&I water deliveries totaled 877.2 billion gallons in 1984, up 29 percent over 1983. This represents an average of 116 gallons per capita per day for the 20.7 million people receiving M&I water from Reclamation projects in 1984. Based on a national average requirement of 194 gallons per capita per day, water deliveries from Reclamation facilities provided nearly 60 percent of the daily requirements of the people served.

Other Projects	2,111.9	90.6	320.7	411.3
Total	22,711.5	877.2	381.1	1,258.3

Other nonagricultural water deliveries totaled 381.1 billion gallons in 1984 — 21 percent more than in 1983 — and served 2.0 million people. Miscellaneous nonagricultural uses include irrigation of urban and suburban lands and water for stock, fish and wildlife, and construction uses under temporary contracts.

As shown in table 11, Boulder Canyon Project continues to be first among the leading Reclamation projects supplying M&I and other nonagricultural water to the greatest number of people, followed by the Salt River and Central Valley Projects. The Boulder Canyon Project is a principal supplier of water to the Los Angeles area of Southern California and served 58 percent of the total population receiving M&I and other nonagricultural water in 1984.

Recreation

Bureau of Reclamation projects provide a wide range of water-oriented recreation facilities and opportunities in the semiarid Western States. In 1984, recreation use on Reclamation project lands totaled a record 50.4 million visitor days — up almost 14 percent from the 44.3 million visitor days in 1983. This recreation use is based on the 12-hour visitor day, or 1 visitor day per person involved in some form of recreational activity during a continuous 12-hour period.

Recreation use is measured also by number of visits. Recreation visits to Reclamation project lands reached an alltime record high of 80.8 million in 1984 — 3.7 million more than the previous high set in 1983. Table 12 shows visitation since 1966 in both number of visits and 12-hour visitor days.

Applying an average value of $9.25 per visitor day, the value of recreation on Reclamation project lands totaled about $466 million in 1984. This value is based on current measures used in NED (National Economic Development) benefit evaluation procedures. These procedures assign recreation values ranging from $1.70 to $5.10 per unit day for general recreation (depending on the ratings assigned to each individual area) and from $6.70 to $20.20 per unit day for specialized recreation, other than fishing and hunting. The rating criteria and associated measuring standards used for NED evaluation reflect differences in quality, relative scarcity, activities available, accessibility, and aesthetic features of recreation areas.

Table 13 lists the recreation areas reporting over 1 million visitor days in 1984. Lake Mead National Recreation Area, which surrounds Hoover Dam and its reservoir Lake Mead, continued to be the most

Water skiers create beautiful patterns at Lake Meredith, Texas.

Table 12. – Recreation Visitation, 1966-84

Year	12-Hour Visitor Days	Visits*
	(millions)	
1966	28.8	44.9

Fishing is a popular activity at recreation areas on Reclamation projects.

popular area with a record 5.8 million visitor days. Nearly 1.2 million visitors toured Hoover Dam itself, accounting for another 48,250 visitor days.

Of the 291 recreation areas reporting visitation in 1984, eight areas reported over 1 million visitor days. Another 12 areas reported between 500,000 and 1 million visitor days in 1984. Together, these 20 popular areas accounted for over half of the total visitation to recreation areas on Reclamation project lands. By contrast, the 191 areas with less than 100,000 visitor days accounted for only 9 percent of the total use. Table 14 provides a frequency distribution of recreation areas by number of visitor days in 1984.

The 291 recreation areas on Reclamation projects provided about 4.6 million acres of land, 1.7 million water surface acres, and 12,500 miles of shore-line for public recreation in 1984. Over 3.2 million acres

Swimmers enjoy Lake Elwell, which was formed by Tiber Dam, Montana (Pick-Sloan Missouri Basin Program).

of land were open to public hunting. Public use facilities in these areas included:

- 852 campgrounds with 29,000 campsites
- 65 mobile home/trailer parks with 5,100 spaces
- 775 picnic areas with 18,300 picnic tables
- 700 boat launch ramps with 1,300 ramp lanes
- 145 swimming beaches

Various types of concessions on Bureau projects — such as cafes, golf courses, marinas, lodges and resorts, campgrounds, trailer parks, and tour boat operations — numbered 240 in 1984.

The policy of the Bureau of Reclamation is to transfer management of recreation areas on its project lands to other Federal and non-Federal governmental entities. In 1984, Reclamation shared in the management of 13 areas and was the sole managing agency at 36 recreation areas. State and local agencies managed all or part of 169 areas, followed by other Federal agencies with 91, water user organizations with 16, and other organizations with 4 areas. Figure 5 shows the total number of recreation areas managed, in whole or part, by each type of administering agency at Reclamation facilities.

New investment in recreation facilities totaled $24.9 million in 1984, of which $277,000 was for fish and wildlife expenditures. Operation and maintenance costs totaled $45.5 million, of which $6.4 million was spent by the Bureau of Reclamation, $36.4 million by principal managing agencies, and $2.7 million by other agencies.

Boat launch ramps at Folsom Lake, California (Central Valley Project).

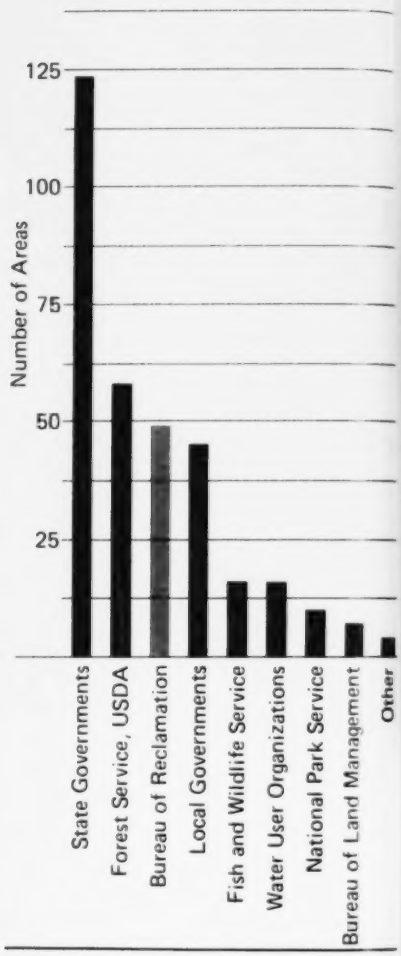

Figure 5. – Number of Recreation Areas Managed by Administering Agency, 1984

Flood Control

Controlled releases at Canyon Ferry Dam, Montana, on the mainstem of the Missouri River.

Another near-record runoff eason occurred in many parts of e West this spring, requiring flood ntrol operations at Reclamation ams to alleviate the potential for erious flooding.

During 1984, storage of excess noff in Reclamation reservoirs pre- ented downstream flooding that ould have caused damages esti- ated at $242 million This is the ird highest annual benefit of record nd over three times the 35-year verage annual benefit of $78.5 mil- on for the period 1950-84. Cumula- ve benefits for this same period mounted to $2.7 billion — more an 2-1/2 times the estimated 1 billion cumulative expenditure allocated to flood control (including construction and operation and maintenance) since Reclamation's first specific allocation of funds for flood protection in 1926. This benefit-cost ratio would be even greater if the unrecorded benefits from 1926 to 1950 were included. Inclusion of unmeasured flood control benefits for reservoirs that do not have formally allocated flood control space would even further increase the benefit-cost ratio. Figure 6 compares flood control benefits and costs for the period 1974-84.

The U.S. Army Corps of Engineers estimates flood control benefits for the Bureau of Reclamation on a project basis. Benefits are determined by calculating the difference between the floodflows that would have occurred had the project not been constructed and the flows which actually occurred.

In the Pacific Northwest, the annual runoff for most major streams ranged from about 80 to 380 percent of normal. On the Columbia

Other Projects	29.5	209.1
Total	$242.0	$ 2,746.0

* Includes 1983 benefits that were unavailable for the 1983 report.

Basin Project, the winter and spring drawdown of Franklin D. Roosevelt Lake, behind Grand Coulee Dam, for power production and flood control made 3.6 million acre-feet available for controlling spring runoff. This flood control operation prevented $2.1 million in damage along the lower Columbia River in the Portland-Vancouver area.

The October to July runoff of the Boise River above Lucky Peak Lake was 131 percent of normal. Anderson Ranch and Arrowrock Reservoirs (Boise Project) were credited with preventing possible flood damages along the Boise River estimated at $44.1 million.

On the Minidoka-Palisades Project, Idaho-Wyoming, flood control operations at Jackson Lake and Palisades Reservoirs prevented $20.5 million in local flood damage. These operations, along with the operation of American Falls Reservoir, prevented another $6.3 million in flood damage downstream, primarily on the lower Columbia and lower Snake Rivers.

Water year 1984 produced the second consecutive year of record high flows in the Colorado River and Great Basins. Flooding was especially severe in the Gunnison Basin, Colorado. Blue Mesa and Taylor Park Reservoirs (Colorado River Storage Project) prevented $5.5 million in flood damages in Montrose, Delta, and Mesa Counties, Colorado. Weber Basin Reservoirs prevented $15.7 million in damages in Morgan and Weber Counties, Utah.

A record $97.5 million in flood damages to crops, farmland, irrigation facilities, and recreation developments along the lower Colorado River — from Davis Dam to the Mexican Border — was prevented by mainstem features in 1984. Flood control benefits along the lower Colorado River in 1983, which were not assessed and reported last year, totaled $79.7 million.

Under the P-SMBP (Pick-Sloan Missouri Basin Program), storage in Canyon Ferry Lake was effective in controlling the third highest inflow volume of record. Storage remained in the exclusive flood pool for 45 days. This control prevented flood damage totaling $10.3 million on the mainstem of the Missouri River and in and around Great Falls, Montana. With the control provided by Canyon Ferry Dam, the Missouri River remained below flood stage during the entire runoff period.

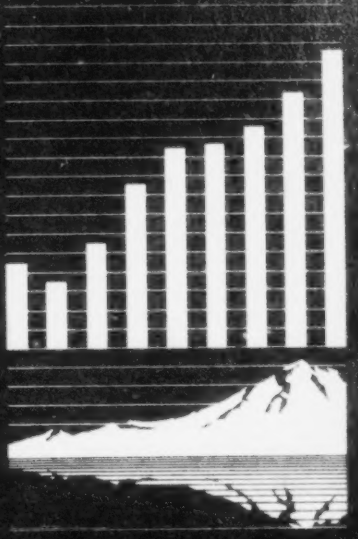
At Clark Canyon Reservoir (P-SMBP), Montana, heavy rains accompanying snowmelt runoff produced the highest peak inflow of record and resulted in the highest reservoir level since records began in 1907. Clark Canyon Reservoir played an important role in preventing serious flooding estimated at $2.5 million along the Beaverhead River.

In the North Platte River Basin, 1984 water year inflows to Glendo Reservoir (P-SMBP), Wyoming, were 148 percent of normal. About 206,000 acre-feet of storage was used for flood control, preventing $4.3 million in local flood damage.

Inflows to Seminoe Reservoir (Kendrick Project) were 189 percent of normal in 1984 — the third highest of record. Seminoe Reservoir was operated in conjunction with downstream Pathfinder Reservoir (North Platte Project) and Alcova Reservoir (Kendrick Project) to maintain riverflows through Casper, Wyoming, at the historic safe channel capacity. Flood damage totaling $5.3 million was prevented by this reservoir system.

Table 15 ranks the 10 leading projects according to cumulative value of flood damage prevented from 1950-84.

Summary Tables



UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF RECLAMATION

General Statistics
(For calendar year 1984, unless specified)

Table 1

GENERAL

Agency established by act of the Congress, signed by President Theodore Roosevelt, June 17, 1902	
Bureau staff, September 30, 1984	8,444
Job Corps staff	180
Area and population:	
17 Western States, total area in square miles	1,833,000
17 Western States, total population	68,991,000
17 Western States, population estimate - 2000	90,821,000

Projects authorized to November 17, 1983	161
Projects range in size from Intake Project, a canal and pumping plant costing $88,000, to the Pick-Sloan Missouri Basin Program in 10 states, and Central Valley ultimately costing $5.93 billion, as currently authorized.	
Total estimated cost (excludes interest during construction and non-Bureau features)	$25,089,000,000
Actual cost to date	$11,143,000,000

PHYSICAL FEATURES
(Constructed and under construction by the Bureau of Reclamation, September 30, 1984)

Storage dams and dikes:			
Completed or rehabilitated (241 reservoirs)	328	Total storage capacity in acre-feet	134,089,000
Under construction (11 reservoirs)	11	Total storage capacity in acre-feet	7,622,000
Total (252 reservoirs)	339	Total storage capacity in acre-feet	141,711,000
Diversion dams, completed or rehabilitated	153	Canals	379
Under construction	1	Length in miles	7,448
Total	154	Tunnels	181
Major pumping plants, over 1,000 horsepower	191	Length in feet	1,409,000
Horsepower	2,860,000	Pipelines, length in miles	1,079

SUMMARY OF OPERATIONS AND FINANCE

OPERATIONS

Irrigation

Irrigated acres:	
Full supply	4,182,000
Supplemental and temporary supply	5,623,000
Total irrigated acres	9,805,000
Irrigable acres for service:	
Full supply	5,107,000
Supplemental and temporary supply	6,934,000
Subtotal	12,041,000
Irrigable acres not for service	4,939,000
Total irrigable acres	16,980,000
Crop value - crop year 1984	$ 7,592 million
- cumulative	$106,428 million
Total acreage irrigated, 1978 - 17 Western States	43,629,000

Hydroelectric Power 2/

Projects, Bureau constructed and operated	23
Hydroelectric powerplants	52
Capacity authorized, kW	13.1 million
Capacity installed, kW	13.1 million
Capacity under construction, kW	23 thousand
Additional ultimate capacity, kW	372 thousand
Transmission lines in circuit miles	299
Substations and switchyards in operation	100
Gross generation - kWh	59 billion
- cumulative kWh	1,285 billion
Gross income from electric power operation, FY 1984 (marketed by DOE)	$607 million
Total U.S. generation, CY 1984 prel., kWh	2,439 billion

Municipal, Industrial, and Nonagricultural Water

Deliveries, gallons	1,258.5 billion
or acre-feet	3.9 million
Cumulative from 1956, gallons	17,177 billion
Population served	22.7 million
Income from operations, FY 1984	$7.5 million
Cumulative	$86.4 million

Recreation

Recreation areas on projects	291
Visitor days (12-hour)	50.4 million
Shorelines, miles	12,500
Water area, acres available	1.7 million
Land area, acres available	4.8 million

Flood Control

Damages averted, 1984	$ 242.0 million
Cumulative from 1950	$2,746.0 million

FINANCE 1/

Investment in Facilities (excluding DOE)- FY 1983 ($ millions)

Completed plant in service:	
Irrigation	1,398
Power, electric (includes interest during construction)	1,470
Municipal and industrial water service	172
Multipurpose and other	4,609
Total, in service	7,849
Cost of plant under construction	4,002
Total investment in facilities	11,851

Estimated Total Authorized Project Cost Allocations (excluding DOE)

Reimbursable:	
Irrigation	13,665
Commercial power (without interest during construction)	5,032
Municipal and industrial water (without interest during construction)	2,964
State funds not allocated	191
Salinity alleviation and water quality	111
Deferred allocations	119
Other purposes	150
Subtotal, reimbursable - 80.7%	20,230
Nonreimbursable:	
Flood control, navigation, and safety of dams	1,377
Fish and wildlife conservation	1,137
Irrigation (585) and salinity alleviation (322)	907
Recreation, health, and safety	627
Mexican Treaty	427
Other purposes	364
Subtotal, nonreimbursable - 19.3%	4,839
Total	25,069

Construction Costs Repaid

Repayment contracts	472
Power revenues (excluding DOE)	891
Service contracts, contributions	448
Total	1,811

Repayment Contracts

In effect September 30, 1982	3,382
Pending	1,863
Total ultimate	5,245

Bureau Income From Operations - FY 1984

Irrigation water rentals and assessments	31.1
Municipal and industrial water sales	7.5
Electric power revenues (including DOE)	607.0
Total operating income	645.6
Net income after expenses and other deductions	202.1

Total Federal Funds Available Through FY 1983

Investigations	709
Advance planning	103
Construction	12,040
Rehabilitation and betterment	144
Operation and maintenance	2,966
Administration	524
Loan program	454
Permanent operating authorizations	385
Emergency fund and drought emergency assistance	152
Total	17,387

1/ The financial data are as of September 30, 1982, except as noted.
2/ Excludes Reclamation's share of Navajo Generating Station steam plant (346 750 kw).

SUMMARY CROP PRODUCTION REPORT 1984

PROJECT AND SUBDIVISION — ALL REGIONS, ALL PROJECTS BY TYPE IRRIGATION
STATE — 17 WESTERN STATES

SUMMARY CROP PRODUCTION REPORT 1984

PROJECT AND SUBDIVISION — ALL REGIONS, ALL PROJECTS BY TYPE IRRIGATION
STATE — 17 WESTERN STATES
TYPE OF SERVICE — FULL

ACREAGE SUMMARY

		CLASS 1-4	CLASS 5	TOTAL
	LANDS IN IRRIGATION ROTATION (ACRES)			
11	HARVESTED CROPLAND AND PASTURE (EQ LINE 194)	4,070,064	2,346	4,072,410
12	CROPLAND NOT HARVESTED AND SOIL BUILDING	109,387	266	109,653
13	ACRES IRRIGATED (LINES 11 AND 12)	4,179,421	2,642	4,182,063
14	DRY CROPPED, FALLOW, OR IDLE	231,496	131	231,627
15	TOTAL AREA IN IRRIGATION ROTATION (LINES 13 AND 14)	4,410,917	2,773	4,413,690
	LANDS NOT IN IRRIGATION ROTATION (ACRES)			
16	DRY CROPPED, IDLE, FALLOW OR GRAZED	139,664	16,032	155,696
17	FARMSTEADS, ROADS, DITCHES, DRAINS	177,973	1,586	179,559
18	TOTAL AREA NOT IN IRRIGATION ROTATION (LINES 16 AND 17)	317,637	17,618	335,255
19	URBAN AND SUBURBAN LANDS	384,630	2,936	387,566
20	TOTAL IRRIGABLE AREA FOR SERVICE (LINES 15 AND 18 AND 19)	5,083,184	23,327	5,106,511
21	TOTAL IRRIGABLE AREA NOT FOR SERVICE			2,110,095
22	TOTAL IRRIGABLE AREA (LINES 20 AND 21)			7,216,606
23	CLASS 6 - TEMPORARILY IRRIGATED			6,225

CROP VALUE SUMMARY

31	GROSS CROP VALUE (EQ LINE 194)			3,056,339,388
	ADDITIONAL REVENUE-			
33	FEDERAL ASCS PAYMENTS	TOTAL $	7,995,724	
34	SUGAR PROGRAMS	TOTAL $	13,040,707	
35	TOTAL ADDITIONAL REVENUE (LINES 33 AND 34)			21,036,431
36	TOTAL VALUE (LINES 31 AND 35)			3,077,375,819
37	TOTAL IRRIGATED ACREAGE (EQ LINE 13)			4,182,063
38	AVERAGE VALUE PER IRRIGATED ACRE (LINES 36 / 37)			735.85

NUMBER OF FARMS AND POPULATION

		NO OF FARMS OPER. UNITS	IRRG. ACRES FOR SERVICE	POPULATION
41	FULL TIME FARMS	41,655	4,173,994	177,496
42	PART TIME FARMS	25,057	674,981	135,937
43	URBAN AND SUBURBAN LANDS (ACRES EQ LINE 19)		387,566	753,596
44	TOTAL (ACRES FROM LINE 20)	66,712	5,106,511	1,067,029
